                                                                                                              The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.
                                                                                           Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     genes, proteins, vectors containing the genes and Ab are also useful therapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins

CC The invention relates to human nucleic acids (AAI57798-AAI61369) and the CC encoded polypeptides (AAM36642-AAM42213) with nootropic, CC immunosuppressant and cytostatic activity. The polynucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous System, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system disease, such as CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic cand thrombolytic activity, cancer diagnosis and therapy, drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and CC c.N.S disorders. Note: The sequence data for this patent did not form cycles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAM39043

The invention relates to isolated, recombinant polypeptides (I) that have at least one activity of specified bacterial enzymes involved in cell membrane biogenesis. (I) are: UDP-N-acetylglucosamine 1-carboxyvinyl transferase-1 of Streptococcus pneumoniae (S.p.), Pseudomonas acruginosa (P.a.) or Staphylococcus aureus (S.a.); CTP:CMP-3-deoxy-D-manno-octulosonate transferase of Escherichia coli (E.c.) or Haemophilus influenzae (H.i.); UDP-N-acetylmuramylalanyl-D-glutamate- 2,6-

Crystalline (I) are used to determine (by X-ray diffraction analysis) the structural coordinates of (I), and these then used to design modulators of (I), potential therapeutic agents for treating diseases caused by the specified bacteria. This sequence represents epitope from one of the proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             18-APR-2000;

CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cativity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and creatment of diseases associated with inappropriate (I) expression. For cexample, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome ct that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) colynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the proteins and polynucleotides may be used to acide may be used to acide may be used to acide the cell to express the correction. (I) proteins and polynucleotides may be used to provent, cancers and cancer metastases of haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cancers and cancer metastases of haematopoietic-derived cells. AAK64703 crepresent the present invention. AAK85492 and AAM82169 crepresent invention. AAK85492 and AAM82169 crepresent invention.

                                                                                                                                      The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                        Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human bone marrow.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; bone marrow expressed exon; gene expression analysis; probe; microarray; cancer; leukaemia; lymphoma; myeloma.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-09-513-999C-4616
Sequence 21131, Application US/09252991A
PATENT NO. 6551795
GENERAL INFORMATION:
APPLICANT: MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 21131
LENGTH: 90

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Post-processing: Listing first 45 summaries
        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score

New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tin which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                         Ghosh
Ma Y,
                                                                                                                                                     WPI; 2003-569235/53.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          novel gene; novel protein; tissue marker; molecular weight marker; chromosome marker; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods AH03166 to AH13628 and AH13633 to AH18742 represent human cDNA sequences; AH92446 to AH95893 represent human amino acid sequences; and AHH3629 to AHH3632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      10-DEC-2002; 2002WO-US039555
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0,
```

The invention proteins. The

comprises the amino acid and DNA and protein sequences of ID NO 1078; 1177pp; English.

coding sequences of novel the invention are useful

a8:

                                                                              The sequence is that of a protein which can be used in the preparation of CC the recombinant breast cancer antigen, BRCA1, binding proteins BARD1, CC B123, BE2, BE14, BE31 or BE445, or a composition for the detection of a CC BARD1, B123, BE2, BE14, BE31 or BE445 nucleic acid sequence, specifically CC a wild type BARD1 composition for the detection or purification of BRCA1, CC useful to identify a patient having, or at risk of developing cancer. CC BARD1 can be used in the preparation of an anti-BARD1 antibody, and in the detection and purification of a BRCA1 protein. BARD1, B123, BE2, CC BE14, BE31 or BE445 can used in the identification of barD1, B123, BE2, BE14, BE31 or BE445 complex. The antibodies can be used to detect BARD1, B123, BE2, BE14, BE31 or BE445 complex. The antibodies can be used to detect BARD1, B123, BE2, BE14, BE31 or BE445 complex. The antibodies can be used to detect BARD1, B123, BE2, BE14, BE31 or BE445 complex. The antibodies can be used to antibody can be used to identify a patient having or at risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
